## zPoint Products's USB Dongles (Zongles)

zPoint Products makes a tiny **USB dongle (Zongle)** that is a ZigBee Configurator.

The one in the photo is an unpackaged product so you can see the number of components required to build this. In addition, zPoint Products has added our own applications and messaging to simplify application development.

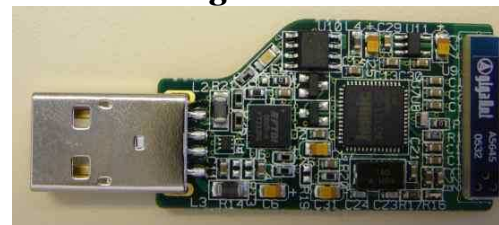

There are currently 3 versions of the **Zongle** (ZigBee USB Dongle):

1. **TI version.** This Zongle can use the 2006 ZigBee stack.
2. **5121 Jennic chip.** Intended for developers, this Zongle can use both the 2004 ZigBee stack or the IEEE 802.15.4 MAC code.
3. **5139 Jennic chip.** Intended for developers, this Zongle can use the Jenie AT interface.
